

Ajay Rathod

Full Stack Developer

✉ ajaygrathod@outlook.com ☎ 9503950292 📍 Pune

PROFILE

Full Stack Engineer with 3 years of hands-on experience in developing scalable web applications using **Java, Spring Boot, Node.js, and React**. Proficient in building robust RESTful APIs and backend systems, with strong expertise in **MySQL and MongoDB** integration. Skilled in implementing complex business logic and managing secure data transactions. Experienced in writing unit and integration tests using **Jest, JUnit, and Postman** to ensure code reliability. Comfortable with version control using Git.

PROFESSIONAL SYNOPSIS

- Proficient in **Java and Spring Boot** for developing robust, high-performance RESTful APIs.
- Developed responsive and user-friendly **frontends using React.js**, ensuring seamless integration with Spring Boot APIs for real-time data interaction.
- Strong knowledge of **MySQL, and MongoDB** including database design, query optimization, and integration using Spring Data JPA.
- Experienced with Swagger for API documentation and Postman for thorough API testing.
- Experienced in **building RESTful APIs** and scalable backend services using Spring Boot, focusing on performance, security, and maintainability.
- Proficient in using modern Java features (**Streams, Lambdas, Optional, Functional Interfaces**) to write clean and efficient code.
- Skilled in applying Spring Boot annotations and concepts like **Dependency Injection, AOP**, and configuration properties for robust application development.
- Experienced in writing integration tests using **@SpringBootTest**, and **test coverage for service, controller, and repository** layers.
- **Comfortable with Git for version control**, collaborative development,

SKILLS

Programming Languages

Java, SpringBoot, JavaScript, ReactJS, PassportJS, NodeJS, Redux, JSON, SPA.

Integration

Stripe, Google Map API, Twilio, WhatsApp, MYSQL, MongoDB, Third Party API

Project Management

- JIRA
- Git
- Critical Thinking
- Teamwork
- Time Management

Software Development Skills

- Microservices Architecture
- RESTful APIs
- JPA
- Unit Testing (JEST)
- Version Control (Git)

PROFESSIONAL EXPERIENCE

Software Engineer

HCL Technology

2022 – 2024

Pune, India

Web Developer

Walstar Technologies

2021 – 2022

Pune, India

PROJECTS

DPS App - Debt Processing System

2022 – 2024

As a Software Engineer at HCL Technologies, I am responsible for the development and maintenance of the Debt Processing System (DPS APP) — a comprehensive fullstack application designed to support debt management and financial service operations.

- Developed secure and scalable **RESTful APIs** using Java and Spring Boot to handle complex business logic and backend processing.
- Implemented a clean layered architecture (**Controller, Service, Repository**) in Spring Boot for modular, maintainable, and testable code.

- Integrated MySQL database using **Spring Data JPA** for efficient **CRUD** operations and optimized query handling.
- Built responsive and interactive **Single Page Applications** (SPAs) using **React.js**, focusing on usability and performance.
- Managed frontend state using **Redux Toolkit**, handling user sessions, roles, and API data flow efficiently.
- **Used React Hooks** (useState, useEffect, useContext) for functional and cleaner component development.
- Used **Git for version control** and collaboration within the team, maintaining an efficient and organized development workflow.

Invoice Generation

2022 – 2023

Invoice Generation System automates the creation of detailed invoices listing products or services provided to customers, along with pricing, quantities, and totals, serves as a formal payment request and maintains a record of seller-buyer transactions.

- **Developed RESTful APIs using Spring Boot** to manage invoice lifecycle operations such as creation, retrieval, update, and deletion.
- **Implemented business logic in the service layer** to calculate totals, taxes, and discounts, ensuring accurate and consistent invoice data.
- **Integrated MongoDB using Spring Data** MongoDB for flexible and schema-less data storage, enabling efficient handling of invoice documents.
- Designed modular controller and service classes to ensure clean architecture and easy code maintenance.
- Implemented input validation using Spring Boot's validation framework to ensure data integrity and prevent invalid invoice submissions.
- Documented APIs using **Swagger/OpenAPI**, enabling clear interface contracts and easier collaboration with frontend and third-party systems.
- Performed thorough API testing using **Postman to validate all endpoints** and business rules.

Site Ranker Pro - Website Analytics & SEO Monitoring Tool

2021 – 2022

- Developed RESTful APIs using Java and Spring Boot to fetch and process SEO and traffic data from Google Analytics and Google Search Console.
- Integrated external APIs (Google APIs) on the **backend to retrieve real-time and historical website traffic data** such as sessions, users, bounce rate, etc.
- Implemented data aggregation and transformation logic in the backend to structure analytics data for efficient frontend rendering.
- Secured API endpoints using Spring Security with role-based access control and JWT token authentication.
- Exposed endpoints to deliver SEO metrics such as keyword rankings, impressions, CTRs, and page performance scores for frontend visualization
- Used Spring Boot scheduling to fetch and cache analytics data periodically, ensuring optimized API performance and reduced latency.

EDUCATION

Computer Science & Engineering

Dr. Babasaheb Ambedkar Marathwada University

2016 – 2018

Aurangabad

Diploma In Computer Science

M.I.T College Aurangabad

2014 – 2015

Aurangabad

PERSONAL DETAILS

Nationality: Indian

Language: English, Hindi, Marathi

Gender: Male
